The present ingention relates to egathetic HIV Gag and For expression cassettes. The Gag protein of HIV is needed for the assembly of virus-like particles. In addition, the Gag protein is involved in many stages of the HIV life cycle, including assembly, virion maturation after particle release and early post-entry steps in viral replication. The expression cassettes may be used for the recombinant expression of HIV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gad" and Engrepolypeptides which may then be used to vaccinate against HIV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             biristronic in that the coding sequences for Env and Gag are under the confrol of a single CMV promoter and between the two coding sequences an Internal Ribosome Entry Site (IRES) is present.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               infection and acquired immunodeficiency syndrome (ADS). The present sequence is a synthetic construct constructed in the generation of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        expression essentes of the present invention, This construct is

Expression casestos enviding the boson immunodeficiency virus (HIV) Gag-containing polypeptide useful for vaccinating against HIV infections and acquired immunodeficiency syndrome (AIDS)

Claim 19: Fiq 64; 391pp; English.

The present invention relates to synthetic BIV Gag and Env expression cassettes. The Gag protein of HIV is needed for the assembly of viras like particles. In addition, the Cag protein is involved in many stages of the HIV life cycle, including assembly, virion maturation after particle release and early post-outry steps in viral replication. The

```
particle release and early post-entry steps in viral replication. The expression eassettes may be used for the recombinant expression of HIV Cag and Env polypeptides which may then be used to vaccinate against HIV
expression cassettes may be used for the recondingnt expression of HIV cag- and Env-polypeptides which may then be used to vaccinate against HIV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to synthetic HIV Gar and Env expression cassettes.
